

We integrated reflection script with this template. So, you can add reflection to your images without editing them in Photoshop.

Beside that, you have full control over the reflection height and opacity.

How to add reflection effect to the picture

Add `class="reflect"` to any image you'd like to have reflection effect, and you are done!

To control the effect's **height**, use `class="reflect rheight25"`. In this case, height of the reflection will be 25% of the image height. You can also, control **opacity** of the reflection. Use `class="reflect ropacity60"` and opacity will be set to 60%. You can also combine height and opacity, in example `class="reflect rheight25 ropacity60"`.
